

ADA cdt/4 Implant Codes & Descriptions

D6054	Implant/abutment supported removable denture for partially edentulous arch	
D6055	Dental implant supported connecting bar	A device attached to transmucosal abutments to stabilize and anchor a removable over denture prosthesis.
D6056	Prefabricated abutment	A connection to an implant that is a manufactured component usually made of machined high noble metal, titanium, titanium alloy or ceramic. Modification of a prefabricated abutment may be necessary, and is accomplished by alternating its shape using dental burs/diamonds.
D6057	Custom abutment	A connection to an implant that is a fabricated component, usually by a laboratory, specific for an individual application. A custom abutment is typically fabricated using a casting process and usually is made of noble or high noble metal. A "UCLA abutment" is an example of this type of abutment.
D6058	Abutment supported porcelain/ceramic crown	A single crown restoration that is retained, supported and stabilized by an abutment on an implant; may be screw retained or cemented.
D6059	Abutment supported porcelain fused to metal crown (high noble metal)	A single metal-ceramic crown restoration that is retained, supported and stabilized by an abutment on an implant; may be screw retained or cemented.
D6060	Abutment supported porcelain fused to metal crown (predominantly base)	A single metal-ceramic crown restoration that is retained, supported and stabilized by an abutment on an implant; may be screw retained or cemented.
D6061	Abutment supported porcelain fused to metal crown (noble metal)	A single metal-ceramic crown restoration that is retained, supported and stabilized by an abutment on an implant; may be screw retained or cemented.
D6062	Abutment supported cast metal crown (high noble metal)	A single cast metal crown restoration that is retained, supported and stabilized by an abutment on an implant; may be screw retained or cemented.
D6066	Implant supported porcelain fused to metal crown (titanium, titanium alloy, high noble metal)	A single metal-ceramic crown restoration that is retained, supported and stabilized by an implant; may be screw retained or cemented.
D6067	Implant supported metal crown (titanium, titanium alloy, high noble metal)	A single cast metal crown restoration that is retained, supported and stabilized by an abutment on an implant; may be screw retained or cemented.
D6068	Abutment supported retainer for porcelain/ceramic FPD	A ceramic retainer for a fixed partial denture that gains retention, support and stability from an abutment on an implant; may be screw retained or cemented.
D6069	Abutment supported retainer for porcelain fused to metal FPD (high noble metal)	A metal-ceramic retainer for fixed partial denture that gains retention, support and stability from an abutment on an implant; may be screw retained or cemented.
D6071	Abutment supported retainer for porcelain fused to metal FPD (noble metal)	A metal-ceramic retainer for a fixed partial denture that gains retention, support and stability from an abutment on an implant; may be screw retained or cemented.
D6072	Abutment supported retainer for cast metal FPD (high noble metal)	A cast metal retainer for a fixed partial denture that gains retention, support and stability from an abutment on an implant; may be screw retained or cemented.
D6073	Abutment supported retainer for cast metal FPD (predominantly base metal)	A cast metal retainer for a fixed partial denture that gains retention, support and stability from an abutment on an implant; may be screw retained or cemented.
D6074	Abutment supported retainer for cast metal FPD (noble metal)	A cast metal retainer for a fixed partial denture that gains retention, support and stability from an abutment on an implant; may be screw retained or cemented.
D6075	Implant supported retainer for ceramic FPD	A ceramic retainer for a fixed partial denture that gains retention, support and stability from an implant; may be screw retained or cemented.
D6076	Implant supported retainer for porcelain fused to metal FPD (titanium, titanium alloy, or high noble metal)	A metal-ceramic retainer for a fixed partial denture that gains retention, support and stability from an implant; may be screw retained or cemented.
D6077	Implant supported retainer for cast metal FPD (titanium, titanium alloy,	A cast metal retainer for a fixed partial denture that gains retention, support and stability from an implant; may be screw retained or cemented.
D6078	Implant/abutment supported fixed denture for completely edentulous arch	A prosthesis that is retained, supported and stabilized by implants or abutments placed on implants but does not have specific relationships between implant positions and replacement teeth; may be screw retained or cemented; commonly referred to as a "hybrid prosthesis."
D6079	Implant/abutment supported fixed denture for partially edentulous arch	A prosthesis that is retained, supported and stabilized by implants or abutments placed on implants but does not have specific relationships between implant positions and replacement teeth; may be screw retained or cemented; commonly referred to as a "hybrid prosthesis"
